New UX Directions

One Continuous News Journey (No Separate Systems)

Right Now The Product Feels Like:

Home
Premium
My View
Quick Read
Section Tabs
Bottom Nav
Hamburger

Too Many Systems =
Cognitive Load + Confusion + Low Retention.

News Should Feel Like One Flowing Experience.

Inside The Feed: **Quick Summaries, Deep Analysis, Premium Stories, Personalized Stories**

User Should Scroll, Not Switch Systems.

Speed + Depth Model (Quick + Deep Layers)

Modern Users Want

- **Fast Scan**
- Deep Understanding

Morning → Fast Headlines
Evening → Deep Reading

Not Different Tabs. Different Depths.

Invisible Personalization (Feed-Level, Not Tab-Level)

Now Personalization Is Optional:

- My View
- **Quick Read**
- **Specific Tab** This Means User Must Actively Choose Personalization.

Personalization Should Be Invisible.

If User Reads Tech:
More Tech News.

If User Reads Politics:
More Political Nwqs

Basically We Need To Move From Feature-Based Navigation To Experience-Based Design.

Current App : Tabs For Features

New App: Continuous Personalized News Journey

This Will Aligns With:

- Working Professionals (25–44)
- Speed + Depth Behavior
- Competitive Reference
- Reduced Cognitive Load
- Better Retention
