3023	3008	3127	3129	3432	3534	3482	3737				
3874	3964	3870	4094	4195	4542	4585	4587				

Current UX Problem

1. The AMP lottery result page does not provide ticket-search functionality.

User coming to result page In most cases, not to read the article.
Their primary goal is: "Check whether my ticket won."

- User Intent Mismatch

Google Search
↓
Kerala Lottery Result AMP Page
↓
Want to check ticket
↓
Search functionality unavailable
↓
Need to manually compare numbers

The user reaches the destination but cannot complete the main task efficiently.

Recommendation

- Provide ticket-search functionality within AMP if technically feasible.

2. The current search experience requires users to enter the complete ticket number, which may create unnecessary effort for users who typically verify lottery results by first checking the last 4 digits of their ticket.

Current search box says:
Enter Full Ticket Number Without Space

This forces users to:
• Type the entire number
• Press search
This creates unnecessary effort.

- User Impact
- Increased typing effort
 - Higher chance of input errors
 - Slower result verification
 - Doesn't fully align with common lottery-checking behavior

Recommendation

Placeholder Should be → Enter Ticket Number or Last 4 Digits
